

## IN THE SPECIFICATION

Page 5, replace the paragraph at line 19 to line 21 with the following paragraph:

--According to another feature, the invention relates to dendritic cells that are  $\alpha\alpha\beta_3$   $\alpha\alpha\beta_3^-$ ,  $\alpha\alpha\beta_5^+$ ,  $CCR5^-$  and  $CCR7^+$ , i.e. are devoid of  $\alpha\alpha\beta_3^-$   $\alpha\alpha\beta_3$  and  $CCR5$  receptors and carry  $\alpha\alpha\beta_5$  and  $CCR7$  receptors.--

Page 7, lines 22-27: amend the paragraph as follows:

--However, it was shown that the maturation of DC induced by  $TNF-\alpha$  caused the induction of IL-12 production and a dramatic inhibition of IL-10 synthesis after activation by CD40. Thus mature DC according to the invention are capable of triggering the differentiation of naive T lymphocytes into type 1 T lymphocytes. Furthermore, the addition of PGE2 inhibited IL-10 production, but also IL-12 production by mature DC obtained."--
